

AMENDMENTS TO THE SPECIFICATION

In the Specification

Please substitute the following amended paragraph(s) and/or section(s) (deleted matter is shown by strikethrough and added matter is shown by underlining):

Page 5, line 10-line 19

The main beam 20 preferably includes two attachment structures 50 extending from the top wall 40. The attachment structures 50 are used for attaching the floor panels 24 to the main beams 20. Each of the attachment structures 50 includes a first support section 52 and a second support section 54, which are shaped substantially complimentary to each other.

Upper surfaces 53, 55 of the first and second support sections 52, 54, respectively, define a semi-circular or convex shape. Extending between the first and second support sections 52, 54 is a channel 56. The walls of the channel 56 preferably have a threaded surface to facilitate attaching the floor panels 24 to the main beam 20 as is discussed in more detail below.
